We Are Committed to the Clinical Roots of Chinese Medicine

[SUBHEADING]

Classical Pearls is a part of an international movement that seeks to honor and restore the classical origins of Chinese medicine.

[BODY]

Chinese medicine is a highly sophisticated science and deeply spiritual art form. Chinese herbal formulation is based on simple foundational principles that are often ignored or misunderstood in the construct of modern TCM education. With Classical Pearls' formulas and the core educational concepts behind them, the goal is to preserve the true clinical power and efficacy of Chinese herbal medicine.

Each of the remedies incorporates principles of classical formula design synthesized from the ancient texts of Chinese medicine and a variety of classical lineage approaches. Based on over two decades of clinical experience, tightly structured classical formulas have been selected, combined or modified to specifically address the diseases of our time. It is the sincere hope of Classical Pearls that the study and use of the two series of products can help Oriental medicine practitioners increase their clinical efficacy and gain a better understanding of the time-honored principles of alchemical wisdom that are gradually being forgotten.

[HEADING]

Purity, Quality, Potency Means Efficacy

[SUBHEADING]

Classical Pearls formulas and single herbs are free of pharmaceuticals, preservatives, dyes, yeasts, and sugars.

[BODY]

All ingredients are independently tested three times for heavy metals, pesticides, and microbes. These rigorous testing procedures ensure the safety of all products - at the source in China before and after processing, and then again after entering the US. This regimen of stringent purity controls contributes to the high level of positive clinical outcomes practitioners should aspire to.

Patients who are treated for chronic and recalcitrant diseases often have allergies to ancillary substances such as heavy metals, dyes, yeasts, flow agents and preservatives. Besides the immune responses that these additives may generate in patients, they can potentially interfere with the proper action of herbs and supplements, thereby inhibiting potency and treatment results. As an alternative, minimal amounts of bentonite clay have been selected as an excipient for the formulas due to its hypoallergenic and therapeutic nature. Capsules are made of the purest vegetable matter - no gelatin is used. Sugars, yeasts, and starches made from rice, corn or potatoes are never used in the formulas.

Considering the uncertainty of materials being imported from China and other parts of the world, the goal of Classical Pearls is to maintain transparency in each step of the growing, harvesting, manufacturing, and testing processes for each of the raw herbs that make up their products. Classical Pearls is working on a system to make the safety and authenticity certificates for each product on the product detail pages of their website.
